

# THE CLENJA APP

This project is a typical fintech app that aims to make certain features its selling point,

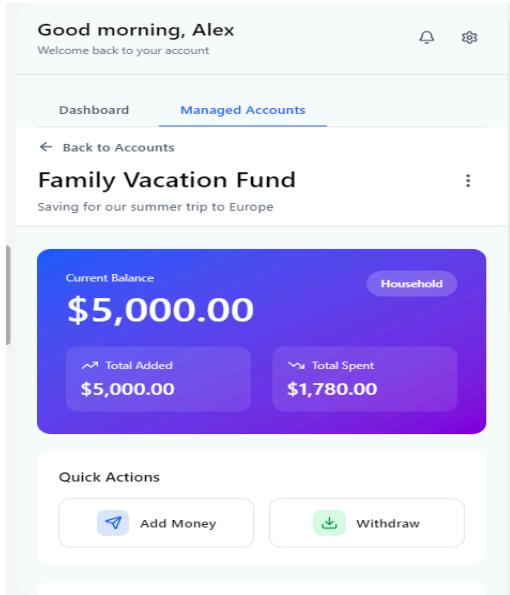

The joint account feature. With this feature, a user can create a separate (**holding**) account designed to be shared and partitioned with other users on the app, unlike their main account on the app.

This holding account will serve as a container to hold funds set aside for specific purposes, for example, a travel fund, a family expense fund, children's allowance or pocket money, or errand funds. When this money has been moved to this holding account. The creator of the account(The admin) can partition the account to other users of his/her choosing or just make them coAdmins to use the account with equal rights.

When the users who the admin partition the account with login the there app they will see the specific amount allocated to them by the admin. This will be in a separate account from their main app account. Also in a different scenario the admin can partition the account and give a group of people access to the partition instead of only one person. The admin can make their access to the account free range or dictate the percentage each user is entitled to.

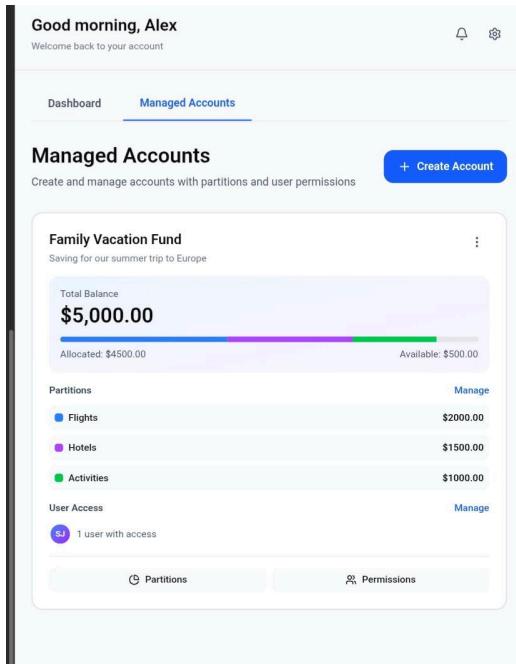

Main account

A separate account.(Holding account)

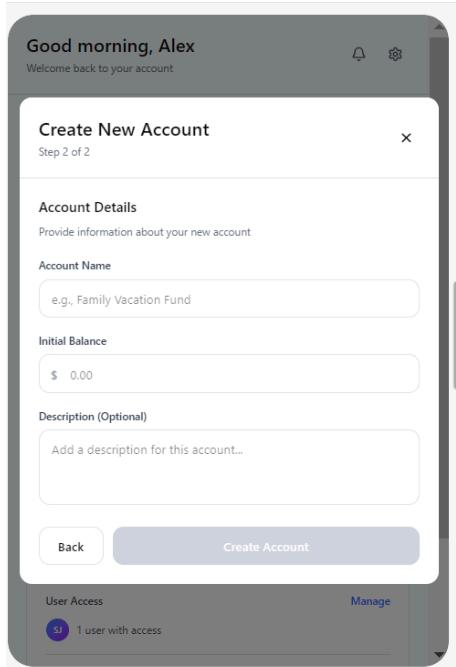

In the image above the user has a separate account , called Family Vacation Fund.

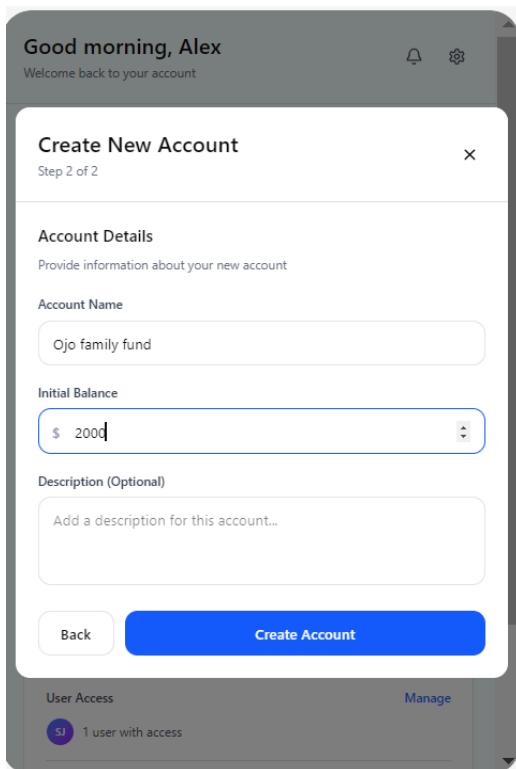

The account is partitioned and 1 person has access to the account.

The screenshot shows the 'Managed Accounts' section of a financial application. At the top, there's a navigation bar with 'Dashboard' and 'Managed Accounts' (which is underlined). Below the navigation is a title 'Managed Accounts' and a subtitle 'Create and manage accounts with partitions and user permissions'. To the right is a blue button labeled '+ Create Account'. The main area is titled 'Managed Accounts' and shows a 'Family Vacation Fund' account. A modal window titled 'Create New Account' (Step 1 of 2) is open, asking to 'Select Account Type'. It lists four options: 'Shared Account' (selected), 'Business Account', 'Household Account', and 'Project Account'. Each option has a small icon and a brief description. At the bottom of the modal is a 'Next →' button.

This is the interface to create a new account with fund allocation features.

Here , these are necessary fields to fill before creating the account.

Activities \$1000.00

User Access Manage

1 user with access

Ojo family fund

Total Balance \$2,000.00

Partitions Add

No partitions created

User Access Add

No users added

View Details

Partitions Permissions

The account is yet to be partitioned and permission is yet to be given.

Hotels \$1500.00

Activities \$1000.00

User Access Manage

1 user with access

Manage Permissions

Ojo family fund

Partitions Permissions

The frames above show the access levels the user that will be added to the partitioned account could possibly be given.

The image displays two side-by-side screenshots of a mobile application interface, likely for managing financial accounts. Both screens show a similar layout with a top header and a bottom section for account details and management.

**Top Screenshot (Left):**

- Header:** Shows two items with amounts: "Hotels" (\$1500.00) and "Activities" (\$1000.00).
- User Access:** Shows "Manage" and "1 user with access".
- Buttons:** A large blue button labeled "View Details" and smaller buttons for "Partitions" and "Permissions".

**Bottom Screenshot (Right):**

- Title:** "Ojo family fund".
- Total Balance:** \$2,000.00.
- Partitions:** Shows "Add" and "No partitions created".
- User Access:** Shows "Manage" and "1 user with access".
- Buttons:** A large blue button labeled "View Details" and smaller buttons for "Partitions" and "Permissions".

This is the account, with the amount partitioned , name and the other user who has access to it.
